YOUR POWER TESTING SOLUTION

IT-M3800

Regenerative DC Electronic Load

Your Power Testing Solution

IT-M3800
Regenerative DC electronic load

The IT-M3900 product family includes four series : DC power supply, bidirectional power supply, regenerative power system and regenerative DC electronic load. It keeps the consistent high power density design of the M series.
In a 1U unit, the power can reach up to 6kW, the current can reach 510A, and the voltage is up to 1500V, which greatly saves your room. Rich models and powerful functions allow you to complete various complex tests with confidence.

IT-M3800 series regenerative DC electronic load can not only perform as a DC load, but also feed back power to the grid, which saves electricity and cooling costs for you. It can complete high-precision output and measurement, and supports multiple protection functions. It is well applied to the test of 5G communication and data center, industrial components test, aging test, PV and energy storage test, power optimizer and other fields.

FEATURE

- Compact design, 1U@6kW, 2U@12kW
- Voltage range: 10~1500V
- Current range: 8A~720A
- Power range: 12kW
- Master/slave parallel connection, keep good performance while power extension*1
- Efficient power regeneration - reduce cost of electricity and cooling
  Slope of voltage, current and power is settable
- Battery discharge test
- Short-circuit simulation
- List function, max.200 steps
- 8 operation modes under Source mode： CC/CV/CW/CR/
- CC+CV/CV+CR/CR+CC/CC+CV+CW+CR
  Von function - On/Off control
- Multiple protection: OVP / ±OCP / ±OPP / OTP /voltage transient
- drop protection/anti-islanding
  Power grid automatic detection
- Built-in USB/CAN/LAN/digital IO interfaces, Optional GPIB/
- Analog&RS232

*This series 10V of 2U models can support up to 8 units in parallel, other models can support up to 16 units in parallel.

APPLICATION

5G Communications & Data Centre

Server power supply， HVDC power supply
48V rack power supply

Industrial component

Fuse, automotive connector, current sensor

Photovoltaic Energy Storage

MPPT DC-DC power supply, power optimizer

Aging

Power module, wiring harness

Your Power Testing Solution

IT-M3800 Regenerative DC electronic load

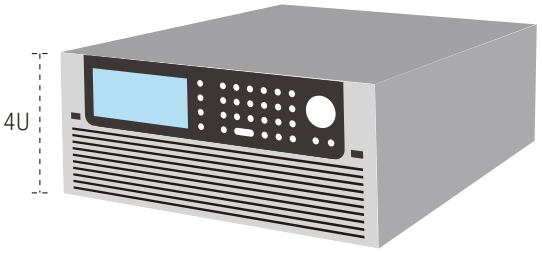
High power density, compact size design

ITECH has been adhering to the high power density design to help customers optimize test solutions. IT-M3800 series provide up to 6kW power in 1U chassis, and up to 12kW power in 2U chassis. ITECH entire high power density product line is more complete and comprehensive.

ITECH

VS

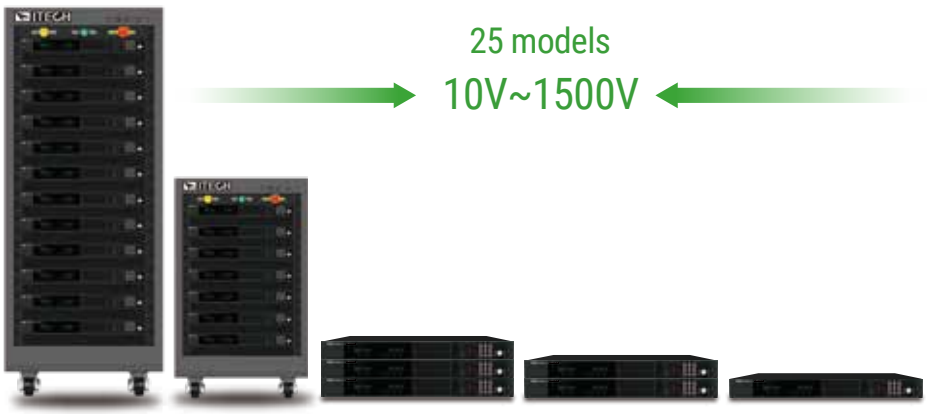
6kW solution

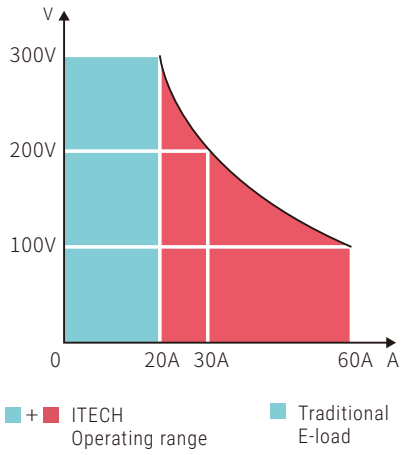


Other brands

Wide range design， save your purchasing cost

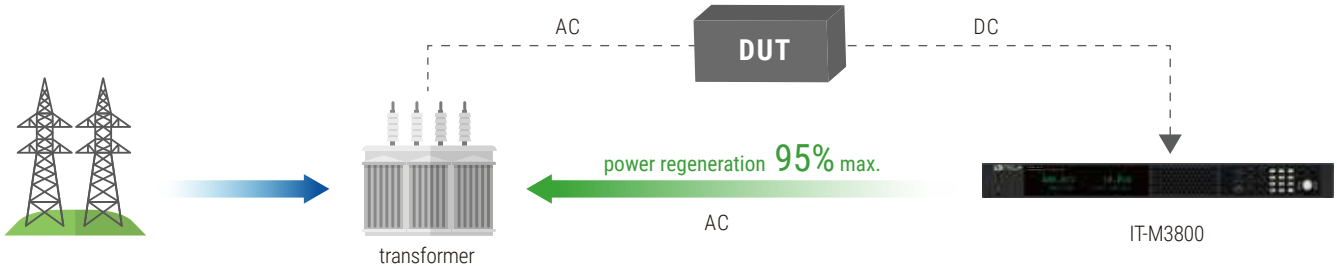
The IT-M3800 series has 25 models, with voltage from 10V~1500V and current up to 720 A. The wide range design provides users with more voltage and current combinations than the traditional fixed range DC loads, making it more flexible. A single unit can cover a wide range of applications, significantly reducing the complexity of system building and saving room.





Power regenerative and eco-friendly

With the power regeneration function, IT-M3800 can feed back up to 95% power instead of consuming it as heat. It not only save your cost of electricity, HVAC and cooling infrastructure, but also help to reduce carbon emission and impact on the environment. In addition, IT-M3800 has the function of automatic grid detection, which can detect phase voltage and frequency in real time and synchronizes with the grid to make energy regeneration automatic and safe.



Production facility : 24Hr/day x 7 work days x 52 weeks

Power	Electricity cost saved (appr. USD/year)	CO_2 emission reduced (appr. ton/year)
6 kW	6,971	50
12 kW	13,943	99
36 kW	41,828	298
96 kW	111,541	794

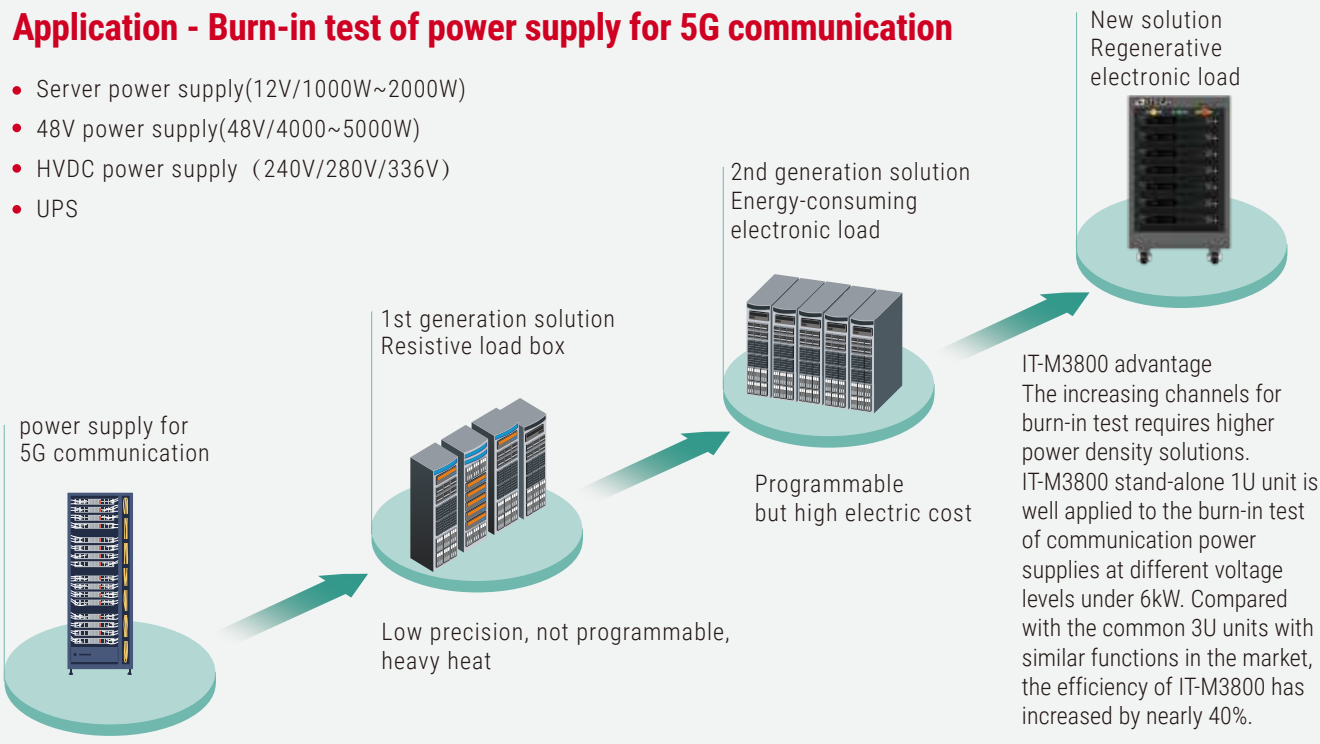
R&D lab : 8Hr/day x 5 work days x 52 weeks

Power	Electricity cost saved (appr. USD/year)	CO_2 emission reduced (appr. ton/year)
6kW	1,747	12
12 kW	3,494	24
36 kW	10,483	71
96 kW	27,955	189

* The data is based on :
1. approximate electricity price 0.14USD/kWh for industry facility
2. 1kWh power consumption ≈ 0.997 CO emission
* The extra cost of air conditioning is not included.

Application - Burn-in test of power supply for 5G communication

- Server power supply(12V/1000W~2000W)
- 48V power supply(48V/4000~5000W)
- HVDC power supply （240V/280V/336V）
- UPS



Your Power Testing Solution

IT-M3800 Regenerative DC electronic load

Electricity accumulation, high energy saving effect

IT-M3800 uses power electronic conversion technology to recycle the output energy of the power supply under test under the premise of completing the test power experiment. Through the internal high-speed voltage and current sampling, the user can directly view the current total amount of feedback on the instrument panel, including voltage/frequency/power of each phase. The total power, real time and historical total recovered electricity. The IT-M3800 series can continue to accumulate electricity on the basis of the value before the last shutdown.

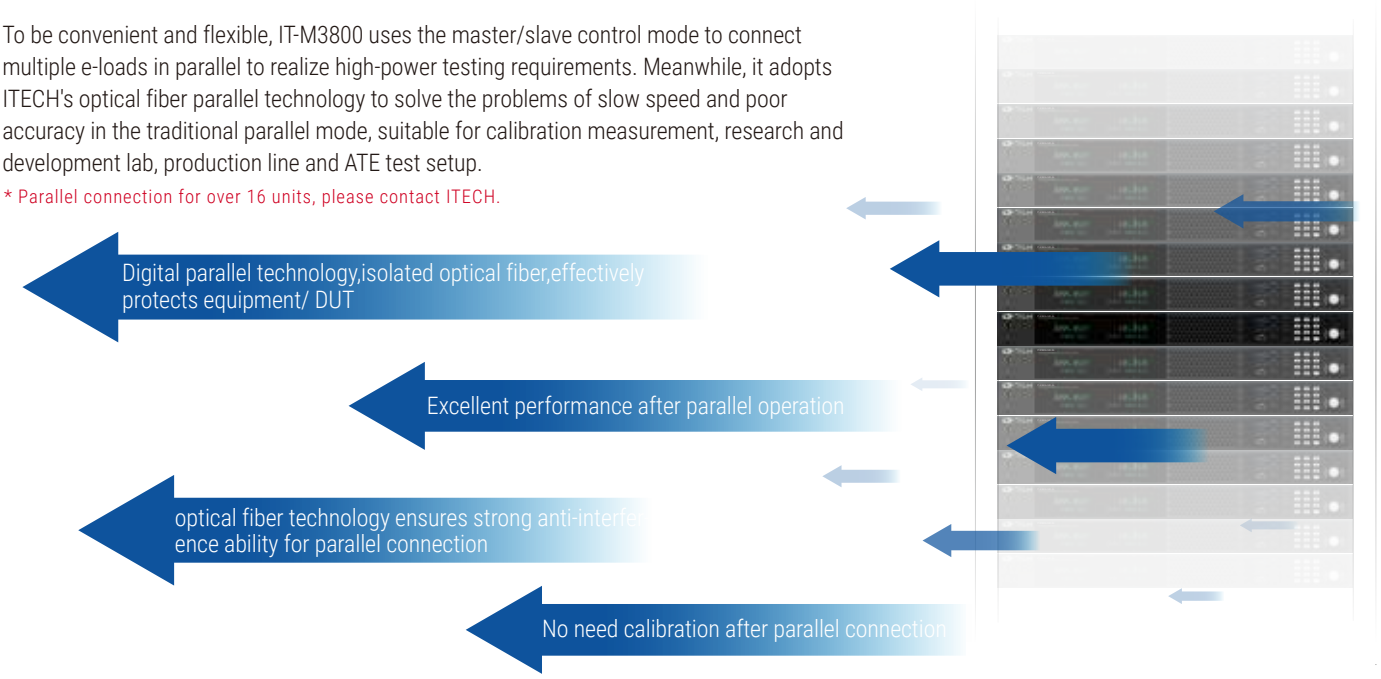
Battery discharge test

The IT-M3800 series have discharge test function, which is suitable for discharging tests on various portable batteries. Three test cut-off conditions of the battery can be set by yourself: cut-off voltage, cut-off capacity and discharge time. When any one of the three conditions is met, the test will be automatically interrupted. During the test, the battery voltage, discharge time and discharged capacity can be observed.

Parallel function

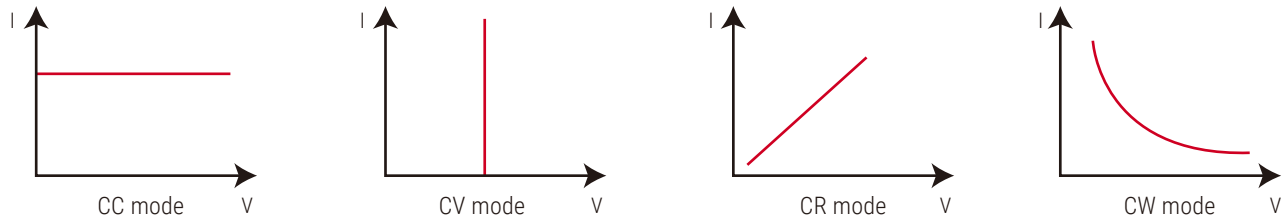
To be convenient and flexible, IT-M3800 uses the master/slave control mode to connect multiple e-loads in parallel to realize high-power testing requirements. Meanwhile, it adopts ITECH's optical fiber parallel technology to solve the problems of slow speed and poor accuracy in the traditional parallel mode, suitable for calibration measurement, research and development lab, production line and ATE test setup.

* Parallel connection for over 16 units, please contact ITECH.

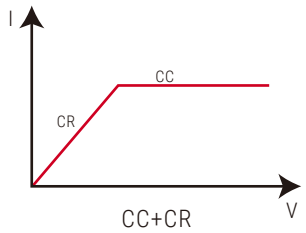


Multi operation modes

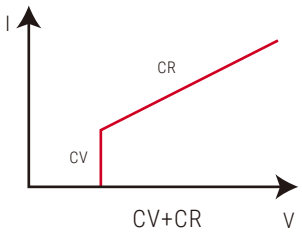
IT-M3800 provides four basic operating modes of CC/CV/CR/CW.



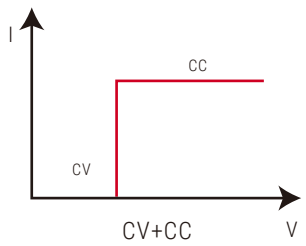
IT-M3800 supports 4 operation modes below :



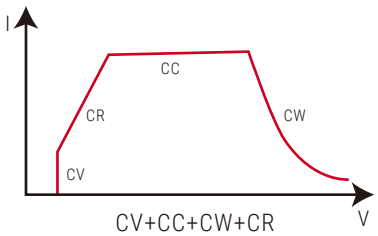
CC+CR mode is normally applied in the testings of OBC voltage limit, current limit characteristics, constant voltage and current accuracy testing, so as to prevent OBC over current protection.



CV+CR mode can be applied to simulate LED light, test LED power, LED current ripple parameters.



CV+CC mode can be applied to load simulate battery, test charging station or car charger, the maximum loading current is limited,when the CV is working.



CV+CC+CW+CR mode can be applied to test lithium-ion battery charger, to gain complete V-I charging curve.In addition, when protection circuit of DUT is damaged, it can auto switch to aviod damage.
